INTRODUCTION

Healthcare Knowledge Resources is the official vendor and distributor of products derived from the clinical research and classification development activities of the Commission on Professional and Hospital Activities (CPHA). Now in its fourth decade as a reliable source for clinical record information, CPHA retains ownership of its databases and classification systems while Healthcare Knowledge Resources develops and markets high quality, information-oriented products and services to the healthcare industry and related fields.

Length of Stay data have been available from CPHA since 1963. This book is one volume in a set of five books presenting statistics on hospital stay during 1989-90 in the United States. The complete set is the latest in a series of publications on length of stay in hospitals that participate in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities. Data from other organizations contributing to CPHA are also included in the series.

The *Length of Stay by DRG and Payment Source* series has been designed as a companion to the standard reference, *Length of Stay by Diagnosis and Operation*, to provide length of stay data by another patient classification system. *Length of Stay by DRG and Payment Source* is designed to assist the healthcare professional in utilization review and other cost containment and evaluation activities.

Notable differences between the *Length of Stay by DRG and Payment Source* series and the *Length of Stay by Diagnosis and Operation* series are primarily with the data source. Data used for the *Length of Stay by DRG and Payment Source* series have been projected to the universe of short-term, nonfederal general hospitals based on patient records from 492 hospitals. A detailed description of the projection methodology is given on page viii. It is important to keep in mind that the numbers and calculations in *Length of Stay by DRG and Payment Source* represent projections rather than actual numbers.

The *Length of Stay by DRG and Payment Source* series is enhanced by providing length of stay data by the following four principal payment sources: Medicare, Medicaid, Blue Cross/Private Insurance, and No Insurance. This allows for comparison of length of stay by clinical condition and patient age among the major healthcare reimbursement systems.

Healthcare Knowledge Resources offers a range of information products, available through books, magnetic media, and educational seminars. In addition to *Length of Stay by DRG and Payment Source*, other titles in the Cost Containment Series include: *Psychiatric Length of Stay* and *Length of Stay by Diagnosis and Operation*. Each series is available on an annual basis for the United States, Northeastern, North Central, Southern, and Western regions. Pediatric Length of Stay (19 years and under) and Geriatric Length of Stay (65 years and over) are also available in the Diagnosis and Operation series for the United States.

These statistics, also available on magnetic tape and diskette, provide a valuable perspective for utilization review, quality assurance professionals, physicians, consultants, hospital administrators, third party payors, and researchers interested in cost containment and quality care.

DESCRIPTION OF THE DATABASE

Source of the Data

Data in the *Length of Stay by DRG and Payment Source* tables were compiled from individual patient discharge records submitted by hospitals participating in the Professional Activity Study (PAS). In addition, discharge data from hospitals participating in information systems other than PAS are included.

The following steps describe the PAS method of storing and retrieving medical data:

1. In each participating hospital, personnel transfer data from the medical record of each discharged patient into the PAS System via PAS+ microcomputer or magnetic tape.
2. The disk or tape is mailed to the center of PAS operations in Ann Arbor, Michigan, where it is entered into the computer system.
3. Data undergo a comprehensive editing process and errors are corrected.
4. The computer system continually adds data to a permanent file. Participating hospitals are provided access to these data through interactive systems, in-house computers, and reports. The stored data are also available to researchers on a contractual basis.
5. Data are standardized to create an aggregated patient record base.

Annually these data are utilized to create the *Length of Stay by DRG and Payment Source* series and other reference tools.

Data Quality

Data quality is a primary concern. Although the hospital has basic responsibility for the quality of PAS data, considerable effort is exerted to prevent and correct errors. Over 600 automated checks are performed during the processing of each record to ensure the reasonableness of the data. Examples of discrepancies detected by the audit are: hospital day of operative episode exceeding total stay, cesarean section with a normal delivery diagnosis, sex-specific diagnosis or operation with the wrong sex recorded, incalculable age or stay, unrecorded or invalid diagnosis. When illogical, invalid, or missing data are detected, about 40 percent of the errors are corrected by computer. The remainder are referred back to hospital staff through computer-generated error messages.

In addition to initial data editing, numerous edits are done to eliminate uncorrected or unusual data. The following events cause a record to be excluded as not representing a typical short-term patient:

1. death, stillborn
2. admission from other short-term hospital
3. discharge to other short-term hospital
4. discharge against medical advice

Hospital Characteristics

Data chosen for inclusion in the *Length of Stay by DRG and Payment Source* series are from general, nonfederal, short-term hospitals in the United States with twelve complete months of discharge data beginning July 1, 1989. The American Hospital Association (AHA)[1] defines these characteristics in the following manner:

General – The primary function of the institution is to provide patient services, diagnostic and therapeutic, for a variety of medical conditions.

Nonfederal –Controlled by state, county, city, city-county, hospital district or authority, church.

Short-term –The average length of stay for all patients is less than 30 days, or over 50 percent of all patients are admitted to units where the average length of stay is less than 30 days.

Most data used in the Length of Stay tables are from hospitals participating in PAS. In addition, the following organizations have sent data: Colorado Hospital Association, Hospital Association of New York State, Michigan Hospital Association, The National Association of Children's Hospitals and Related Institutions, Inc. (NACHRI), New Hampshire Hospital Association, Oregon Hospital Association, Southern Kaiser Foundation Hospitals, Vermont Hospital Association, and Wyoming Hospital Association. Several individual hospitals throughout the United States have also sent data for special studies.

Hospitals participating in PAS from United States Territories and Puerto Rico are excluded from the series. Data from long-term specialty institutions, e.g., long-term psychiatric or rehabilitation facilities, are excluded because these facilities are not general hospitals. Data from psychiatric units within general hospitals are included. Pediatric hospitals are also included.

The characteristics of all hospitals with discharge data included in the Length of Stay books are displayed in Appendix 1.

Projecting to the Universe

To make the *LOS by DRG and Payment Source* sample reflect the activity of U.S. nonfederal, short-term general hospitals the following steps are taken:

Step 1 - Stratification

First, the hospitals are stratified by factors known to affect inpatient utilization. The two factors used are teaching intensity and geographical region:

A. **Teaching Intensity** is determined by a weighted index measuring program intensity created by Phillip and Hai[1]. The index is based on programs, memberships, and affiliations approved by various bodies. The approvals incorporated in the index are:

- Accreditation by the Joint Commission on Accreditation of Healthcare Organizations (JCA)
- Cancer Program approved by the American College of Surgeons (CP)
- Residency approved by the American Medical Association (RES)
- Medical School Affiliation reported by the American Medical Association (MS)
- Hospital-controlled professional nursing school, reported by the National League for Nursing (PNS)
- Member of the Council of Teaching Hospitals of the Association of American Medical Colleges (COT)

Based on this index, hospitals are classified by one of three teaching status groups:

- Low Teaching Intensity Hospitals
- Medium Teaching Intensity Hospitals
- High Teaching Intensity Hospitals

The statistical formula is:

$$lp = 9.9(JCA) + 14.0(CP) + 28.0(RES) + 14.7(MS) + 13.3(PNS) + 20.1(COT)$$

The numerical values in the formula are weights that have been assigned to each of the approvals incorporated in the index.

For the *Length of Stay by DRG and Payment Source* series the following cut-offs are used to stratify hospitals by teaching status:

lp value under 25.0	Nonteaching Institution (low teaching intensity)
lp value 25.0+	Teaching Institution (medium/high teaching intensity)

[1] Phillip P., J., and Hai, Abdul, *An Index of Programs for Hospitals*, American Hospital Association, Chicago, Illinois, 1976.

B. **Census Division** places the 50 states and the District of Columbia into nine geographical areas defined by the U.S. Department of Commerce, Bureau of the Census. These nine divisions and their corresponding regions are:

Region	Division
Northeast	New England
	Mid Atlantic
North Central	East North Central
	West North Central
South	South Atlantic
	East South Central
	West South Central
West	Mountain
	Pacific

A list of the states included in each region is provided in Appendix 2.

Step 2 - Projection

A matrix is constructed which identifies the number of actual discharges from hospitals by program intensity (nonteaching and teaching) and geographical region (Northeast, North Central, South, West). A projection factor is calculated for each cell within the matrix. This factor is calculated as follows:

$$\text{Projection Factor} = \frac{\text{Total discharges from the universe}}{\text{Number of actual discharges in LOS DRG sample}}$$

Each projection factor is multiplied by the number of actual discharges in a particular cell. The resulting numbers represent estimated patient discharges, the sum of which approximates total July 1989 through June 1990 discharges from the U.S. nonfederal, short-term, general hospital universe.

ORGANIZATION OF THE TABLES

The data are stratified by DRG, principal payment source, presence or absence of complications and comorbidities (CCs), and by age ranges.

Diagnosis Related Groups (DRGs)

There are 490 DRGs in the *1989-90 LOS by DRG and Payment Source* series. These DRGs are based on the seventh revision (version 8), effective October 1, 1990. Appendix 3 provides a list of all DRGs for the seventh revision.

Some DRGs have been excluded because they include invalid, ungroupable, or inappropriate categories for examining length of stay. The excluded DRGs are:

DRG Number	English Description
109	(No longer valid)
123	Circulatory Disorders w/AMI, Expired
385	Neonates, Died or Transferred to Another Acute Care Facility
433	Alcohol/Drug Abuse or Dependence, Left Against Medical Advice
438	(No longer valid)
456	Burns, Transferred to Another Acute Care Facility
467	Other Factors Influencing Health Status
468	Extensive Operating Room Procedure Unrelated to Principal Diagnosis
469	Principal Diagnosis Invalid as Discharge Diagnosis
470	Ungroupable
474	(No longer valid)
476	Prostatic Operating Room Procedure Unrelated to Principal Diagnosis
477	Non-extensive Operating Room Procedure Unrelated to Principal Diagnosis

A table is not displayed for the excluded DRGs listed above. Additionally, new ICD-9-CM procedure codes were created 10/1/89 for grouping to DRGs 436 and 437 (Alcohol/Drug Dependence with Rehab Therapy and Alcohol/Drug Dependence, Combined Rehab and Detox Therapy). Patient records used in this series include three months of discharges prior to the addition of the new codes. As a result, only nine months of patient records (from 10/01/89 - 6/30/90) have been grouped to DRGs 436 and 437.

Expected Principal Payment Source

For each DRG, there are four tables corresponding to one of four expected principal payment sources:

1. Medicare
2. Blue Cross/Blue Shield and Private Insurance
3. Medicaid
4. No Insurance

The 'No Insurance' category represents a collapsing of the following payment categories from the PAS abstract: 'Self Pay', 'Other', and 'No Charge'. These three payment categories have not been used consistently by all hospitals contributing data, and therefore this category should be interpreted with some caution.

Presence or Absence of Complications and Comorbidities (CCs)

To determine the presence of complications or comorbidities (CCs), a patient's secondary diagnoses are compared to those specific ICD-9-CM diagnosis codes defined by the Health Care Financing Administration (HCFA) as CCs.

HCFA definitions are:

- A complication is a condition that arises during the hospital stay that prolongs length of stay by at least one day in approximately 75 percent of the cases.
- A comorbidity is a pre-existing condition that will, because of its presence with a specific diagnosis, cause an increase in length of stay by at least one day in approximately 75 percent of the cases.

Determination of the existence of CCs corresponds to the DRG version effective October 1, 1990.

Patient Age and/or Birth Weight

Patient discharges in the Medicare payment source category are in one of the following age groups, recorded in years:

0 - 69
70 - 74
75 - 79
80 - 84
85+

The other three payment source age groups are collapsed as follows:

0 - 17
18 - 34
35 - 49
50 - 69
70+

For DRGs 386 - 391, which classify neonates, the age range is replaced by a birth weight range, recorded in grams. The categories are as follows:

1 - 999
1000 - 1499
1500 - 1749
1750 - 2499
2500 +

All discharge records for newborns and neonates with an unrecorded birth weight have been excluded.

EXPLANATION OF THE STATISTICS

The statistics are displayed by total number of patients, average length of stay, variance, and distribution percentiles. In addition, two subtotals and a grand total are included. Since the *LOS by DRG and Payment Source* series is drawn from patient discharges from 492 hospitals and then projected to the universe of U.S. hospitals, *the numbers and calculations represent projections rather than actual numbers.* One actual patient discharge represents multiple projected patients; the average projection factor is 10.6. If the total number of patients listed is based on five or fewer *actual* discharges, the percentile distribution columns are left blank.

Total Number of Patients

This number represents the total number of projected patients in the stratified group. Patients with stays over 99 days (99+) are not included.

Average Length of Stay

The length of stay is calculated from the admission and discharge dates by counting the day of admission as the first day. The average is figured by adding the lengths of stay for all projected patients and then dividing by the total number of projected patients. Patients discharged on the day of admission are counted as staying one day in the calculation of average length of stay. Patients with stays over 99 days (99+) are excluded from this calculation.

Variance

The variance is a measure of the spread of the data around the average. The smallest variance is zero, indicating all lengths of stay are equal.

When using tables in which there is a large variance, and the projected patient group size is relatively small, the average stay may appear high. This sometimes occurs when one or two patients with long hospitalizations fall into the group.

Distribution Percentiles

A length of stay percentile for a stratified group of projected patients is determined by arranging the projected patient stays from low to high. Counting up from the lowest stay to the point where half of the projected patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total projected patients gives the 10th percentile, and so on.

The 10th, 25th, 50th, 75th, 90th, and 95th percentiles of stay are displayed in days. If, for example, the 25th percentile for a group of projected patients is four, it means 25 percent of the projected patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+.

Patients who were hospitalized 99+ days or longer are not included in the total patients, average stay, and variance categories. The percentiles, however, do include these patients. (If a line of data consists solely of stays of 99+ days, the discharges in that line will be excluded from all portions of the table.)

Subtotal and Grand Total

The subtotal represents the total projected patients in one of the two complication and comorbidity groups, within each payment source. The grand total represents the total number of projected patients in the payment source categories. In cases where a total is off by one patient, it is the result of rounding the projections.

USING THE TABLES

The Length of Stay series can be used as a valuable supplement and reference in a variety of healthcare settings. Use of hospital stay data as an inpatient utilization measure allows the healthcare professional to compare regional and national norms to an individual institution or special population. The Length of Stay series assists in:

- projecting extended stay reviews;
- identifying candidates for utilization review;
- establishing baselines;
- developing forecasts; and
- service planning.

The following steps are intended to provide a guide in situations where a healthcare professional wishes to determine a reasonable length of stay by using one of the Length of Stay regional or national volumes:

Step 1: Consult Appendix 3 at the back of the book for the particular DRG to be reviewed.

Step 2: Find the corresponding table in the book. The DRG number precedes the title of each table.

Step 3: Find the appropriate portion of the table for review:

- Payment Source
- Complication/Comorbidity Status
- Age Group

Step 4: Find the 50th percentile of stay for similar patients at the point where the 50th percentile column of the table intersects the horizontal line containing the pertinent patient variables.

Step 5: Consult the total stratified patient sample (Grand Total) and its variance to consider the homogeneity of the data, i.e., to what extent length of stay averages are clustered or spread out within a particular patient group.

A sample table with descriptions of table elements is provided on page xiv.

These general steps can be followed, with more specific applications, by healthcare professionals in many diverse settings.

INTRODUCTION

Healthcare Knowledge Resources is the official vendor and distributor of products derived from the clinical research and classification development activities of the Commission on Professional and Hospital Activities (CPHA). Now in its fourth decade as a reliable source for clinical record information, CPHA retains ownership of its databases and classification systems while Healthcare Knowledge Resources develops and markets high quality, information-oriented products and services to the healthcare industry and related fields.

Length of Stay data have been available from CPHA since 1963. This book is one volume in a set of five books presenting statistics on hospital stay during 1989-90 in the United States. The complete set is the latest in a series of publications on length of stay in hospitals that participate in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities. Data from other organizations contributing to CPHA are also included in the series.

The *Length of Stay by DRG and Payment Source* series has been designed as a companion to the standard reference, *Length of Stay by Diagnosis and Operation*, to provide length of stay data by another patient classification system, *Length of Stay by DRG and Payment Source* is designed to assist the healthcare professional in utilization review and other cost containment and evaluation activities.

Notable differences between the *Length of Stay by DRG and Payment Source* series and the *Length of Stay by Diagnosis and Operation* series are primarily with the data source. Data used for the *Length of Stay by DRG and Payment Source* series have been projected to the universe of short-term, nonfederal general hospitals based on patient records from 492 hospitals. A detailed description of the projection methodology is given on page viii. It is important to keep in mind that the numbers and calculations in *Length of Stay by DRG and Payment Source* represent projections rather than actual numbers.

The *Length of Stay by DRG and Payment Source* series is enhanced by providing length of stay data by the following four principal payment sources: Medicare, Medicaid, Blue Cross Private Insurance, and No Insurance. This allows for comparison of length of stay by clinical condition and patient age among the major healthcare reimbursement systems.

Healthcare Knowledge Resources offers a range of information products, available through books, magnetic media, and educational seminars. In addition to *Length of Stay by DRG and Payment Source*, other titles in the Cost Containment Series include: *Psychiatric Length of Stay* and *Length of Stay by Diagnosis and Operation*. Each series is available on an annual basis for the United States, Northeastern, North Central, Southern, and Western regions. Pediatric Length of Stay (19 years and under) and Geriatric Length of Stay (65 years and over) are also available in the Diagnosis and Operation series for the United States.

These statistics, also available on magnetic tape and diskette, provide a valuable perspective for utilization review, quality assurance professionals, physicians, consultants, hospital administrators, third party payors, and researchers interested in cost containment and quality care.

DESCRIPTION OF THE DATABASE

Source of the Data

Data in the *Length of Stay by DRG and Payment Source* tables were compiled from individual patient discharge records submitted by hospitals participating in the Professional Activity Study (PAS). In addition, discharge data from hospitals participating in information systems other than PAS are included.

The following steps describe the PAS method of storing and retrieving medical data:

1. In each participating hospital, personnel transfer data from the medical record of each discharged patient into the PAS System via PAS+ microcomputer or magnetic tape.
2. The disk or tape is mailed to the center of PAS operations in Ann Arbor, Michigan, where it is entered into the computer system.
3. Data undergo a comprehensive editing process and errors are corrected.
4. The computer system continually adds data to a permanent file. Participating hospitals are provided access to these data through interactive systems, in-house computers, and reports. The stored data are also available to researchers on a contractual basis.
5. Data are standardized to create an aggregated patient record base.

Annually these data are utilized to create the *Length of Stay by DRG and Payment Source* series and other reference tools.

Data Quality

Data quality is a primary concern. Although the hospital has basic responsibility for the quality of PAS data, considerable effort is exerted to prevent and correct errors. Over 600 automated checks are performed during the processing of each record to ensure the reasonableness of the data. Examples of discrepancies detected by the audit are: hospital day of operative episode exceeding total stay, cesarean section with a normal delivery diagnosis, sex-specific diagnosis or operation with the wrong sex recorded, incalculable age or stay, unrecorded or invalid diagnosis. When illogical, invalid, or missing data are detected, about 40 percent of the errors are corrected by computer. The remainder are referred back to hospital staff through computer-generated error messages.

In addition to initial data editing, numerous edits are done to eliminate uncorrected or unusual data. The following events cause a record to be excluded as not representing a typical short-term patient:

1. death, stillborn
2. admission from other short-term hospital
3. discharge to other short-term hospital
4. discharge against medical advice

Hospital Characteristics

Data chosen for inclusion in the *Length of Stay by DRG and Payment Source* series are from general, nonfederal, short-term hospitals in the United States with twelve complete months of discharge data beginning July 1, 1989. The American Hospital Association (AHA)[1] defines these characteristics in the following manner:

General – The primary function of the institution is to provide patient services, diagnostic and therapeutic, for a variety of medical conditions.

Nonfederal – Controlled by state, county, city, city-county, hospital district or authority, church.

Short-term – The average length of stay for all patients is less than 30 days, or over 50 percent of all patients are admitted to units where the average length of stay is less than 30 days.

Most data used in the Length of Stay tables are from hospitals participating in PAS. In addition, the following organizations have sent data: Colorado Hospital Association, Hospital Association of New York State, Michigan Hospital Association, The National Association of Children's Hospitals and Related Institutions, Inc. (NACHRI), New Hampshire Hospital Association, Oregon Hospital Association, Southern Kaiser Foundation Hospitals, Vermont Hospital Association, and Wyoming Hospital Association. Several individual hospitals throughout the United States have also sent data for special studies.

Hospitals participating in PAS from United States Territories and Puerto Rico are excluded from the series. Data from long-term specialty institutions, e.g., long-term psychiatric or rehabilitation facilities, are excluded because these facilities are not general hospitals. Data from psychiatric units within general hospitals are included. Pediatric hospitals are also included.

The characteristics of all hospitals with discharge data included in the Length of Stay books are displayed in Appendix 1.

Projecting to the Universe

To make the *LOS by DRG and Payment Source* sample reflect the activity of U.S. nonfederal, short-term general hospitals the following steps are taken:

Step 1 - Stratification

First, the hospitals are stratified by factors known to affect inpatient utilization. The two factors used are teaching intensity and geographical region:

A. **Teaching Intensity** is determined by a weighted index measuring program intensity created by Phillip and Hai[1]. The index is based on programs, memberships, and affiliations approved by various bodies. The approvals incorporated in the index are:

- Accreditation by the Joint Commission on Accreditation of Healthcare Organizations (JCA)
- Cancer Program approved by the American College of Surgeons (CP)
- Residency approved by the American Medical Association (RES)
- Medical School Affiliation reported by the American Medical Association (MS)
- Hospital-controlled professional nursing school, reported by the National League for Nursing (PNS)
- Member of the Council of Teaching Hospitals of the Association of American Medical Colleges (COT)

Based on this index, hospitals are classified by one of three teaching status groups:

- Low Teaching Intensity Hospitals
- Medium Teaching Intensity Hospitals
- High Teaching Intensity Hospitals

The statistical formula is:

$$Ip = 9.9(JCA) + 14.0(CP) + 28.0(RES) + 14.7(MS) + 13.3(PNS) + 20.1(COT)$$

The numerical values in the formula are weights that have been assigned to each of the approvals incorporated in the index.

For the *Length of Stay by DRG and Payment Source* series the following cut-offs are used to stratify hospitals by teaching status:

Ip value under 25.0	Nonteaching Institution (low teaching intensity)
Ip value 25.0+	Teaching Institution (medium/high teaching intensity)

[1] Phillip P., J., and Hai, Abdul, *An Index of Programs for Hospitals*, American Hospital Association, Chicago, Illinois, 1976.

B. **Census Division** places the 50 states and the District of Columbia into nine geographical areas defined by the U.S. Department of Commerce, Bureau of the Census. These nine divisions and their corresponding regions are:

Region	Division
Northeast	New England
	Mid Atlantic
North Central	East North Central
	West North Central
South	South Atlantic
	East South Central
	West South Central
West	Mountain
	Pacific

A list of the states included in each region is provided in Appendix 2.

Step 2 - Projection

A matrix is constructed which identifies the number of actual discharges from hospitals by program intensity (nonteaching and teaching) and geographical region (Northeast, North Central, South, West). A projection factor is calculated for each cell within the matrix. This factor is calculated as follows:

$$\text{Projection Factor} = \frac{\text{Total discharges from the universe}}{\text{Number of actual discharges in LOS DRG sample}}$$

Each projection factor is multiplied by the number of actual discharges in a particular cell. The resulting numbers represent estimated patient discharges, the sum of which approximates total July 1989 through June 1990 discharges from the U.S. nonfederal, short-term, general hospital universe.

ORGANIZATION OF THE TABLES

The data are stratified by DRG, principal payment source, presence or absence of complications and comorbidities (CCs), and by age ranges.

Diagnosis Related Groups (DRGs)

There are 490 DRGs in the *1989-90 LOS by DRG and Payment Source* series. These DRGs are based on the seventh revision (version 8), effective October 1, 1990. Appendix 3 provides a list of all DRGs for the seventh revision.

Some DRGs have been excluded because they include invalid, ungroupable, or inappropriate categories for examining length of stay. The excluded DRGs are:

DRG Number	English Description
109	(No longer valid)
123	Circulatory Disorders w AMI, Expired
385	Neonates, Died or Transferred to Another Acute Care Facility
433	Alcohol/Drug Abuse or Dependence, Left Against Medical Advice
438	(No longer valid)
456	Burns, Transferred to Another Acute Care Facility
467	Other Factors Influencing Health Status
468	Extensive Operating Room Procedure Unrelated to Principal Diagnosis
469	Principal Diagnosis Invalid as Discharge Diagnosis
470	Ungroupable
474	(No longer valid)
476	Prostatic Operating Room Procedure Unrelated to Principal Diagnosis
477	Non-extensive Operating Room Procedure Unrelated to Principal Diagnosis

A table is not displayed for the excluded DRGs listed above. Additionally, new ICD-9-CM procedure codes were created 10/1/89 for grouping to DRGs 436 and 437 (Alcohol/Drug Dependence with Rehab Therapy and Alcohol/Drug Dependence, Combined Rehab and Detox Therapy). Patient records used in this series include three months of discharges prior to the addition of the new codes. As a result, only nine months of patient records (from 10/01/89 - 6/30/90) have been grouped to DRGs 436 and 437.

Expected Principal Payment Source

For each DRG, there are four tables corresponding to one of four expected principal payment sources:

1. Medicare
2. Blue Cross/Blue Shield and Private Insurance
3. Medicaid
4. No Insurance

The 'No Insurance' category represents a collapsing of the following payment categories from the PAS abstract: 'Self Pay', 'Other', and 'No Charge'. These three payment categories have not been used consistently by all hospitals contributing data, and therefore this category should be interpreted with some caution.

Presence or Absence of Complications and Comorbidities (CCs)

To determine the presence of complications or comorbidities (CCs), a patient's secondary diagnoses are compared to those specific ICD-9-CM diagnosis codes defined by the Health Care Financing Administration (HCFA) as CCs.

HCFA definitions are:

- A complication is a condition that arises during the hospital stay that prolongs length of stay by at least one day in approximately 75 percent of the cases.
- A comorbidity is a pre-existing condition that will, because of its presence with a specific diagnosis, cause an increase in length of stay by at least one day in approximately 75 percent of the cases.

Determination of the existence of CCs corresponds to the DRG version effective October 1, 1990.

Patient Age and/or Birth Weight

Patient discharges in the Medicare payment source category are in one of the following age groups, recorded in years:

0 - 69
70 - 74
75 - 79
80 - 84
85 +

The other three payment source age groups are collapsed as follows:

0 - 17
18 - 34
35 - 49
50 - 69
70 +

For DRGs 386 - 391, which classify neonates, the age range is replaced by a birth weight range, recorded in grams. The categories are as follows:

1 - 999
1000 - 1499
1500 - 1749
1750 - 2499
2500 +

All discharge records for newborns and neonates with an unrecorded birth weight have been excluded.

EXPLANATION OF THE STATISTICS

The statistics are displayed by total number of patients, average length of stay, variance, and distribution percentiles. In addition, two subtotals and a grand total are included. Since the *LOS by DRG and Payment Source* series is drawn from patient discharges from 492 hospitals and then projected to the universe of U.S. hospitals, *the numbers and calculations represent projections rather than actual numbers.* One actual patient discharge represents multiple projected patients; the average projection factor is 10.6. If the total number of patients listed is based on five or fewer *actual* discharges, the percentile distribution columns are left blank.

Total Number of Patients

This number represents the total number of projected patients in the stratified group. Patients with stays over 99 days (99+) are not included.

Average Length of Stay

The length of stay is calculated from the admission and discharge dates by counting the day of admission as the first day. The average is figured by adding the lengths of stay for all projected patients and then dividing by the total number of projected patients. Patients discharged on the day of admission are counted as staying one day in the calculation of average length of stay. Patients with stays over 99 days (99+) are excluded from this calculation.

Variance

The variance is a measure of the spread of the data around the average. The smallest variance is zero, indicating all lengths of stay are equal.

When using tables in which there is a large variance, and the projected patient group size is relatively small, the average stay may appear high. This sometimes occurs when one or two patients with long hospitalizations fall into the group.

Distribution Percentiles

A length of stay percentile for a stratified group of projected patients is determined by arranging the projected patient stays from low to high. Counting up from the lowest stay to the point where half of the projected patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total projected patients gives the 10th percentile, and so on.

The 10th, 25th, 50th, 75th, 90th, and 95th percentiles of stay are displayed in days. If, for example, the 25th percentile for a group of projected patients is four, it means 25 percent of the projected patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+.

Patients who were hospitalized 99+ days or longer are not included in the total patients, average stay, and variance categories. The percentiles, however, do include these patients. (If a line of data consists solely of stays of 99+ days, the discharges in that line will be excluded from all portions of the table.)

Subtotal and Grand Total

The subtotal represents the total projected patients in one of the two complication and comorbidity groups, within each payment source. The grand total represents the total number of projected patients in the payment source categories. In cases where a total is off by one patient, it is the result of rounding the projections.

USING THE TABLES

The Length of Stay series can be used as a valuable supplement and reference in a variety of healthcare settings. Use of hospital stay data as an inpatient utilization measure allows the healthcare professional to compare regional and national norms to an individual institution or special population. The Length of Stay series assists in:

- projecting extended stay reviews;
- identifying candidates for utilization review;
- establishing baselines;
- developing forecasts; and
- service planning.

The following steps are intended to provide a guide in situations where a healthcare professional wishes to determine a reasonable length of stay by using one of the Length of Stay regional or national volumes:

Step 1: Consult Appendix 3 at the back of the book for the particular DRG to be reviewed.

Step 2: Find the corresponding table in the book. The DRG number precedes the title of each table.

Step 3: Find the appropriate portion of the table for review:

- Payment Source
- Complication Comorbidity Status
- Age Group

Step 4: Find the 50th percentile of stay for similar patients at the point where the 50th percentile column of the table intersects the horizontal line containing the pertinent patient variables.

Step 5: Consult the total stratified patient sample (Grand Total) and its variance to consider the homogeneity of the data, i.e., to what extent length of stay averages are clustered or spread out within a particular patient group.

A sample table with descriptions of table elements is provided on page xiv.

These general steps can be followed, with more specific applications, by healthcare professionals in many diverse settings.
